Subject: Internship Completion Letter

To Whom It May Concern

On behalf of the Nepal Applied Mathematics and Informatics Institute for Research (NAAMII), we are pleased to confirm the successful completion of **Mr. Prabin Thapa's** internship with the Institute. We extend our sincere congratulations on this achievement.

This letter serves as official confirmation that **Mr. Prabin Thapa**, a student pursuing a Bachelor's degree in Electronics, Communication and Information Engineering at Pashchimanchal Campus, Institute of Engineering, Tribhuvan University, completed his internship at NAAMII from **25 March 2025 to 28 March 2026**. His internship focused on medical image analysis and artificial intelligence research at the **Multimodal Medical Data Analysis for Precision Medicine (MAP-MED) Lab at NAAMII**.

During the internship, Mr. Thapa was involved in medical image data annotation, preprocessing, three-dimensional medical image processing, tumour segmentation, and analysis. His responsibilities included CT image annotation and lower-limb labelling using ITK-SNAP and 3D Slicer, medical imaging data conversion, patient cohort organisation, and the development of image-processing methods and a basic bone-segmentation pipeline. He also performed radiomic feature extraction and image-perturbation experiments, applying statistical methods to assess feature robustness. Alongside these activities, he conducted literature reviews, participated in research discussions, and prepared documentation, reports, and academic presentations.

He also contributed to the project "**Personalised Risk Reduction and Toxicity Control in Non-Small Cell Lung Cancer (NSCLC)**", where he worked on developing and evaluating machine-learning and deep-learning models using a multicentre dataset of 451 patients. His responsibilities included data preparation, exploratory data analysis, feature engineering and selection, model training, hyperparameter optimisation, nested cross-validation, statistical analysis, performance evaluation, and result interpretation. He also developed and maintained a machine-learning code repository and studied and optimised three-dimensional deep-learning architectures for medical image analysis.

Throughout this period, Mr. Thapa demonstrated strong commitment, intellectual curiosity, and a collaborative approach, making valuable contributions to the research team and NAAMII's ongoing initiatives. He consistently exhibited technical aptitude, analytical skills, and the ability to work both independently and within a multidisciplinary team. He was punctual, receptive to feedback, and demonstrated significant professional and technical development during the internship.

We wish Mr. Prabin Thapa continued success in his future academic and professional endeavours. We are confident that the knowledge, technical skills, and research experience gained during his internship at NAAMII will provide a strong foundation for his future career in artificial intelligence, machine learning, computer vision, and scientific research.
